

# Eco Village Concept

## What is it? An overview of the idea

- Intermixed, multi-functional spaces (integrated design)
- A mix of affordable and market-rate homes
- A niche development that embodies sustainable and purposeful living
- Leading environmental technologies will be explored
- Built in harmony with the environment and nature
- Community gardens and greenhouse

Note: this is a visual example of the concept only.  
This is not the actual design.

- Co-sharing spaces that build connections between residents
- Financial flexibility - investing in life, not a mortgage
- A central village centre with social spaces and shared amenities for home renters and accessible to the greater Okotoks community
- An enhanced playground
